

Cost Estimation for Custom Design

In order to give you a more accurate cost estimation, we would need some additional information from you.

Expected number of units per year	
Display footprint <i>The area of the rectangle that is created by the outer dimensions of your display including electrodes, etc. (mm x mm)</i>	
Display active area <i>The rectangle that is created by the outer dimensions of your active display area (where the segments are). (mm x mm)</i>	
Number of segments	
Product lifetime <i>Expected product lifetime - please also indicate number of OFF->ON->OFF switching cycles that you expect. (years + number of cycles)</i>	
Environmental conditions <i>Describe the environment where the display should be used, or give absolute values for operating temperature and humidity.</i>	
Driving conditions <i>Describe how the display will be operated (when will it be on? when will it be off? how frequent will the segments be updated? should the segments fade out between updates or kept constantly on?)</i>	
Insert/enclose sketch if available:
